The diverter consists of a robust body manufactured in two sections, split at the centre flange for ease of access to the internal sealing flap.

With the special cone transition at the inlet, the sealing area within the cone forms a complete parabola and therefore an efficient internal seal can be maintained without resorting to sealing ledges - increasing the conveying line pressure, the rubber wiper seals more effectively.

Internals are clean, with no lodgement points, and the transition from one line into two is gradual, limiting turbulence and therefore pressure drop. Similarly, by the streamline design, the valve will also feed from two lines into one - again with no lodgement areas.

Choice of materials can cater for the majority of applications and by plating the body and internal components the semi-abrasive fields can be covered.

Special demand has necessitated the manufacture of a range of 30° divert angle valves to compliment the traditional ranges of 22½° divert angle valves. They are obviously more compact than the 22½° range but have a slightly greater pressure drop due to the increased angle.

Further demands of industry have led to the manufacture of two types of connections: Flanged and Spigotted.

## FEATURES

- Compact design
- Small divert angle
- Low pressure drop
- Smooth internals
- Pneumatic or Manual
- Wide range of materials
- Higher pressure gives greater seal
- Dust tight to 20 p.s.i.
- Easy access and maintenance
- Flanged or Spigotted Ends
- Pneumatics and switches housed in guards

## SPECIFICATIONS

<b>BODIES</b>	Cast in Aluminium, Stainless Steel or Cast Iron
<b>FLAP VALVES AND SPINDLES</b>	Mild Steel or Stainless
<b>WIPER SEALS</b>	Polyurethane or food quality rubber. Temperature limit 180°C
<b>SHAFT SEAL</b>	Rubber 'O' ring
<b>ACTUATION</b>	Air Cylinder or Manual Lever
<b>PNEUMATIC VERSION</b>	Complete with five-port two-way single solenoid spring return valve
<b>LIMIT SWITCHES</b>	Available to indicate open/closed conditions. Pneumatics and switches housed in guards

## SPIGOTTED CONNECTIONS

The spigotted ends are connected to pipework with 'Blo-line' type couplings, facilitating quick access for maintenance. It also gives flexibility in pipe length accuracies and misalignment variation.

Furthermore, the spigotted ends are not of cast fixed length, but bolted on and fabricated of variable length. This enables the ends to be supplied to fit exactly to existing pipework.
